Microsoft® and Windows® are U.S. registered trademarks of Microsoft Corporation.

UNIX® is a registered trademark of The Open Group.

This product includes an interface of the 'zlib' general purpose compression library, which is Copyright © 1995-2002 Jean-loup Gailly and Mark Adler.

## Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

To check for recent software updates, go to <https://downloads.autonomy.com/productDownloads.jsp>.

To verify that you are using the most recent edition of a document, go to <https://softwaresupport.hpe.com/group/softwaresupport/search-result?doctype=online help>.

This site requires that you register for an HPE Passport and sign in. To register for an HPE Passport ID, go to <https://hpp12.passport.hpe.com/hppcf/login.do>.

You will also receive updated or new editions if you subscribe to the appropriate product support service. Contact your HPE sales representative for details.

## Support

Visit the HPE Software Support Online web site at <https://softwaresupport.hpe.com>.

This web site provides contact information and details about the products, services, and support that HPE Software offers.

HPE Software online support provides customer self-solve capabilities. It provides a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the support web site to:

- Search for knowledge documents of interest
- Submit and track support cases and enhancement requests
- Access product documentation
- Manage support contracts
- Look up HPE support contacts
- Review information about available services
- Enter into discussions with other software customers
- Research and register for software training

Most of the support areas require that you register as an HPE Passport user and sign in. Many also require a support contract.

To register for an HPE Passport ID, go to <https://hpp12.passport.hpe.com/hppcf/login.do>.

To find more information about access levels, go to <https://softwaresupport.hpe.com/web/softwaresupport/access-levels>.

To check for recent software updates, go to <https://downloads.autonomy.com/productDownloads.jsp>.

# HPE IDOL Data Admin

HPE IDOL Data Admin is the new name for HPE IDOL Search Optimizer. This new name reflects the increased areas of IDOL functionality that it offers.

## New in this Release

This section lists the enhancements to HPE IDOL Data Admin version 11.4.0.

- You can now configure IDOL Data Admin to use an authenticating reverse proxy.

The following features were added in HPE IDOL Data Admin version 11.3.1.

- The Search window now returns answers from Answer Bank, for users that have the **AnswerBankUser** role.
- In Answer Bank, HPE IDOL Data Admin now presents the likelihood of an existing answer as *high*, *medium*, and *low*, rather than using percentages.
- In Answer Bank, you can now sort the popular questions table by the **Unmatched Equivalent Questions** column.
- In Answer Bank, you can now bulk import questions and answers with a rule, by including an (optional) extra rule column in the import CSV file.
- Document viewing has been improved. If a document does not have the required reference field or connector group and identifier, IDOL Data Admin now renders the title and document content from the Content index in the document previews. In this case, it uses the DRETITLE and DRECONTENT fields to populate the title and content, respectively.

## Resolved Issues

This section lists the resolved issues in HPE IDOL Data Admin version 11.4.0.

The following issues were resolved in HPE IDOL Data Admin version 11.3.2.

- Users with the **Data Admin** role could not see Answer Bank statistics header because of an error in the IDOL Data Admin internal role definitions.
- The Answer Bank Edit Q/A Pair page listed questions that were conceptually similar to the rule in the false positives list, rather than only questions that explicitly matched the rule.
- The About page for IDOL Data Admin 11.3.1 listed incorrect version information.

The following issues were resolved in HPE IDOL Data Admin version 11.3.1.

- IDOL Data Admin attempted to retrieve parametric values for a query even when all the query text was disallowed by a blacklist.
- In the Answer Bank UI, if saving a Question/Answer pair resulted in an error because the rule was not valid, attempts to save the rule again could fail because of a lock acquisition failure.
- In the Answer Bank Edit Question/Answer Pair page, the conceptually similar questions list sometimes did not include valid matches, because the question mark was considered to be a wildcard search operator.
- In the Search UI, parametric fields that contained an underscore ( `_` ) in the name were not recognized in searches or displayed correctly.

# Notes

These notes provide extra information about installing and using HPE IDOL Data Admin.

- Since the 11.0 release of IDOL Data Admin (known as IDOL Search Optimizer), you can configure IDOL Data Admin to use a Connector for document viewing, by using the settings page. This information was not included in the release notes for 11.0.

# Documentation

The following documentation was updated for this release.

- *HPE IDOL Data Admin Installation Guide*
- *HPE IDOL Data Admin User Guide*
