Documentation updates

The title page of this document contains the following identifying information:

- Software Version number, which indicates the software version.
- Document Release Date, which changes each time the document is updated.
- Software Release Date, which indicates the release date of this version of the software.

You can check for more recent versions of a document through the [MySupport portal](#). Many areas of the portal, including the one for documentation, require you to sign in with a Software Passport. If you need a Passport, you can create one when prompted to sign in.

Additionally, if you subscribe to the appropriate product support service, you will receive new or updated editions of documentation. Contact your Micro Focus sales representative for details.

Support

Visit the [MySupport portal](#) to access contact information and details about the products, services, and support that Micro Focus offers.

This portal also provides customer self-solve capabilities. It gives you a fast and efficient way to access interactive technical support tools needed to manage your business. As a valued support customer, you can benefit by using the MySupport portal to:

- Search for knowledge documents of interest
- Access product documentation
- View software vulnerability alerts
- Enter into discussions with other software customers
- Download software patches
- Manage software licenses, downloads, and support contracts
- Submit and track service requests
- Contact customer support
- View information about all services that Support offers

Many areas of the portal require you to sign in with a Software Passport. If you need a Passport, you can create one when prompted to sign in. To learn about the different access levels the portal uses, see the [Access Levels descriptions](#).

New in this Release 4

Resolved Issues 5

Supported Operating System Platforms 6

Documentation 7

New in this Release

This section lists the enhancements to HTTP Connector version 12.1.0.

- The connector can send documents to NiFi Ingest when NiFi requires a username and password for authentication. To configure the connector, set the new configuration parameters `IngestNiFiUsername` and `IngestNiFiPassword`.
- The connector can send files to a Micro Focus Digital Safe, through the Digital Safe REST API or the Digital Safe SOAP API.
- Performance monitoring accepts a minimum limit, maximum limit, or minimum and maximum limits for each performance counter. Earlier versions of the connector required both minimum and maximum limits. For example, you no longer need to specify a minimum level of CPU usage.
- The `[AuthorizationRoles]` section `StandardRoles` configuration parameter now accepts an asterisk (*) to represent all standard roles, so that you can easily set permissions for all roles.
- When importing parameters into your configuration file from another configuration file, you can use wildcards to select the parameters to include.

Resolved Issues

This section lists the resolved issues in HTTP Connector version 12.1.0.

- JavaScript could be injected into the `GetRequestLog` response by sending actions to the server.

Supported Operating System Platforms

NOTE:

HTTP Connector can be installed only with the IDOL Server installer, and only on Solaris platforms. On other platforms, Micro Focus recommends that you use the IDOL Web Connector instead.

The following operating system platforms are supported by HTTP Connector 12.1.0.

- Solaris x86 64
- Solaris SPARC 64

The documented platforms are the recommended and most fully tested platforms for HTTP Connector. The following sections provide more information about the most fully tested versions of these platforms.

Solaris

- Solaris 10
- Solaris 11

Documentation

The following documentation was updated for this release.

- *HTTP Connector Administration Guide*
- *HTTP Connector Reference*
